Nonwoven geotextiles are made from polypropylene fibers. These synthetic fibers are needled punched together to create an interlocking grid with impressive dimensional stability properties. Typically, geotextiles are identified by their mass per unit area instead of their thickness.

Civil grade geotextiles are best suited for applications prioritizing separation, filtration, and drainage. For example, geotextiles provide excellent puncture resistance which prevent aggregates from pushing into the subgrade. At the same time, they increase drainage capacity while retaining smaller fines.

#### Notes:

- (1) All roll widths/lengths have a tolerance of ±1 %.
- (2) Custom roll lengths can be ordered. Transportation cost might be affected.
- (3) Penteco is a distributor for this product. Manufacturing partners are based out of Canada & USA.
- (4) Manufacturer's data sheet provided at time of bid/purchase includes adjusted widths/lengths.

**DISCLAIMER:** The data above represents the manufacturer's laboratory testing of their product. It is the user's responsibility to determine the suitability of the products. Penteco is a distributor for these products through its manufacturing partners. Penteco will provide the manufacturers data sheet at the time of sale. There may be very slight variation, but overall, the data represents standard industry specifications.
